Wormhole (WOL)

Total supply: 10,000,000,000

Network: BSC

Total Burn: 50%

Overview

The term crypto token refers to a special virtual currency token or how cryptocurrencies are denominated. These tokens represent fungible and tradable assets or utilities that reside on their own blockchains. Crypto tokens are often used to fundraise for crowd sales, but they can also be used as a substitute for other things. These tokens are usually created, distributed, sold, and circulated through the standard initial coin offering (ICO) process, which involves a crowdfunding exercise to fund project development.

Goals

1. Setting up a great platform for transactions.
2. A new way to make daily payments.
3. Provide a better and faster solution than DogeCoin
4. Protect the environment and revitalize endangered animals

Wormhole

wormhole needs to support 1000s of transactions per second, to make applications faster and cheaper to use.

wormhole needs to be more secure. As the adoption of Ethereum grows, the protocol needs to become more secure against all forms of attack.

wormhole needs to be better for the environment. The technology today requires too much computing power and energy.

Finally, the wormhole needs to design a powerful wallet to store your currencies with annual profits
